GRRIP project structure

How to incorporate RRI interventions into Case studeis

Identify stakeholders

Who are the stakeholders that we want to include? How to reach them, how to engage them = Working groups

Maturity level of RRI

Perform an oudit of current maturity level of RRI. Collect data – identify base line

List of inteventions

Identified gaps in the audit - identification of possible interventions (LIST)
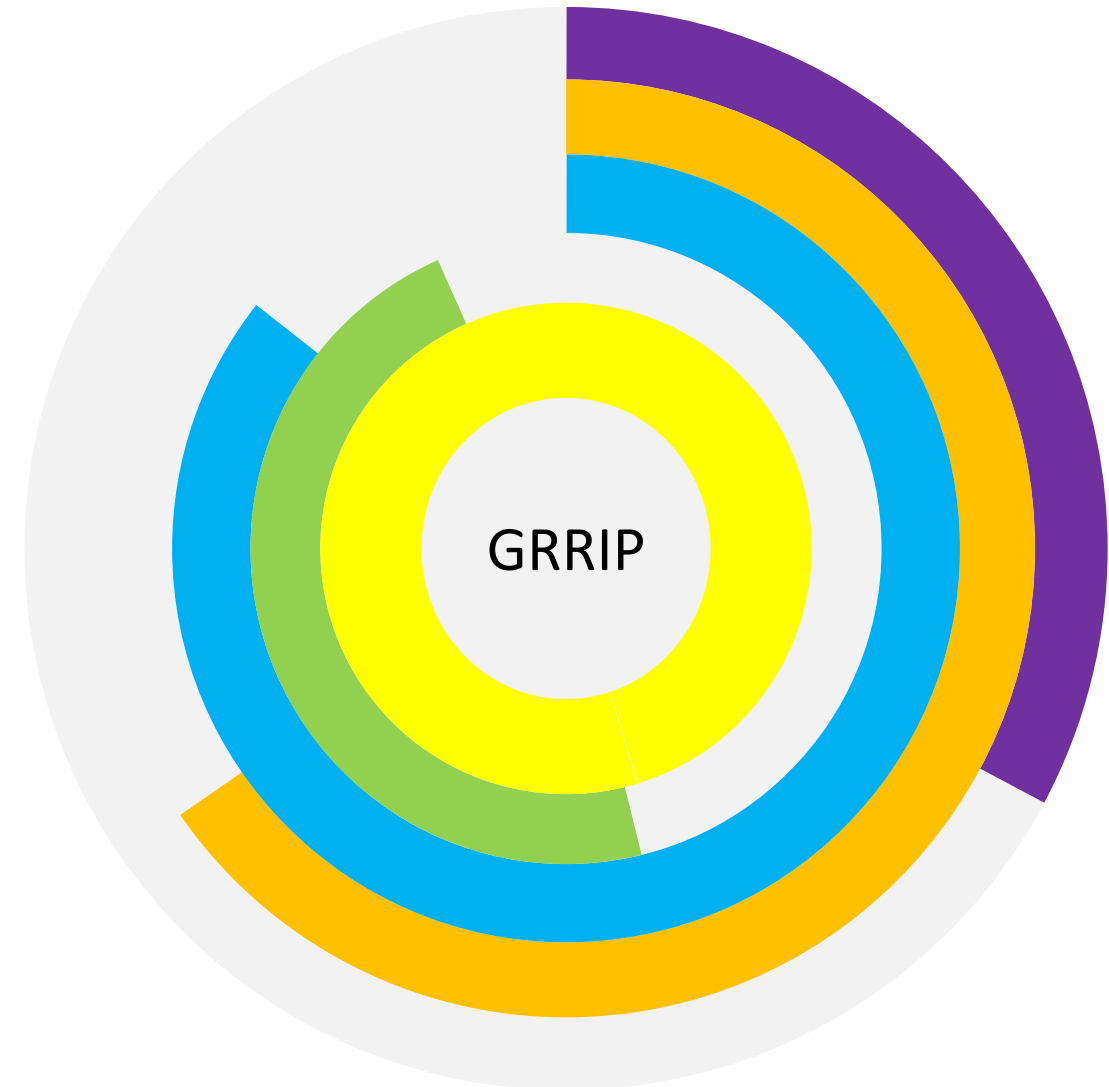

### Action plan development/implementation

Selection of intervention, implementation of intervention (Working group).

Monitor and evaluate

Set up indicators for monitoring of succesfull implementation of interventions

The GRRIP RRI Action Plan Framework

**STRUCTURE:** Designing tools, templates, principles

PROCESS: Drafting, selecting and refining the interventions

CONTENT: Details of the implementation, rationale, stakeholders, trial, risk management, sustainability etc.

MONITORING & EVALUATION: Benchmarking gap analysis

INTERVENTION IN DETAIL:

INDICATORS:

BARRIERS, RISK AND MITIGATION STRATEGY:

SUSTAINABILITY PLAN:

TRIAL PLAN (DELETE IF THE INTERVENTION WILL NOT BE TRIALLED):
If relevant, this section specifies the plan for the trial: its scope, the (subset) of stakeholders involved, timeline for the trial, etc.

INTERVENTION CODE AND TITLE	e.g. 1.1.1. Increasing the use of ethnicity as a key variable in empirical research

KEY/SUBKEY:

PROBLEM AND RESPONSE:

Problem and context: e.g., ethnicity is often considered a „nuisance variable" in research projects, event when the research outcome is sensitive to the ethnic background of groups or individuals <provide specific examples here>. Part of this is due to the difficulty to obtain data about the ethnic background of individuals.

Response and goal: e.g., The goal of this intervention is to sensitize research to the impact of using ethnicity, and to provide procedures that would allow to collect relevant data in two or more ongoing or new research programmes[12]
